Experiment – 5

Student Details Management System Using Zoho One (SaaS)

Aim

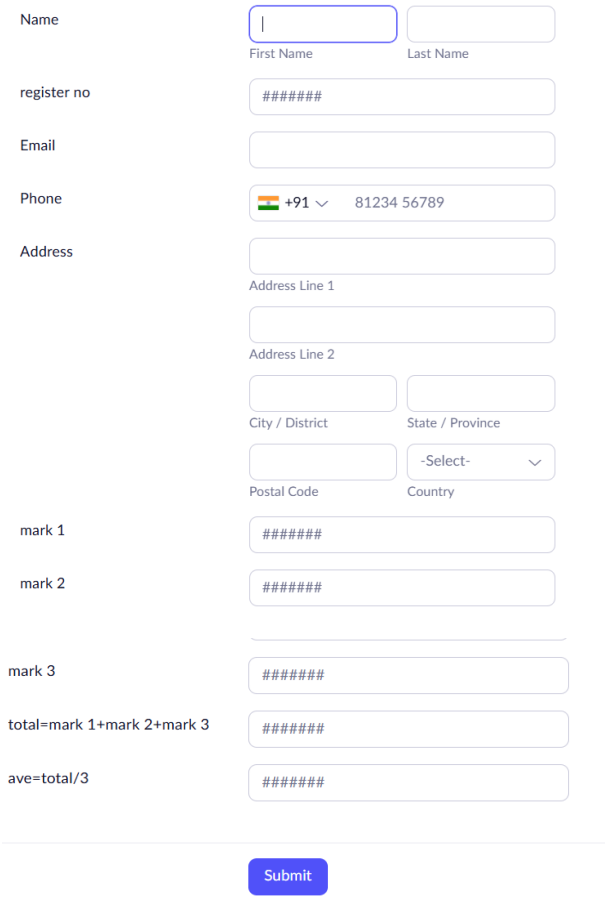

To create a Student Details Management System using Zoho One as a cloud-based Software as a Service (SaaS) application.

Procedure

1. Log in to the Zoho One cloud platform.
2. Open Zoho Creator from the Zoho One applications.
3. Create a new application for the Student Details Management System.
4. Create a new form named Student Details.
5. Add the required fields:
    - Student Name
    - Registration Number
    - Email Address
    - Mobile Number
    - Mark 1
    - Mark 2
    - Mark 3
    - Total= Mark 1+ Mark 2+ Mark 3
    - Ave=total/3
    - Address
6. Configure the field types according to the data required.
7. Design and arrange the form for easy user interaction.
8. Save and publish the form.
9. Enter sample student details into the form.
10. Submit the form and verify that the entered data is stored in the cloud.
11. Test the application by entering different student details.
12. Verify that the Student Details Management System works successfully as a SaaS application.

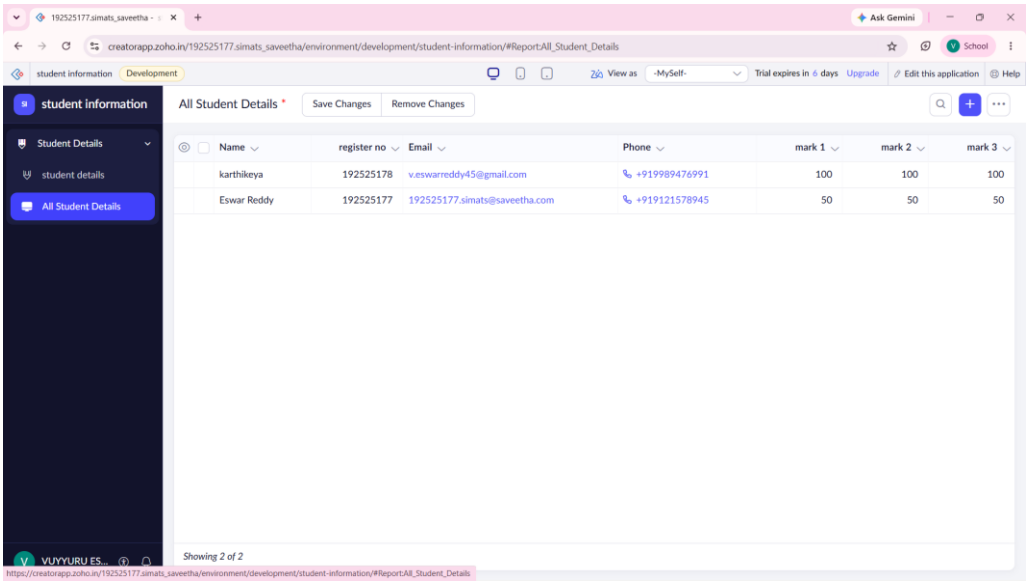

Implementation

Input:

Enter the required student details in the Student Details form, including student name, registration number, email address, mobile number, department, course, year of study, semester, and address.

Output:

The submitted student details are displayed in the Zoho Creator application. The stored student records can be viewed, searched, and managed through the application.

Result

Thus, a Student Details Management System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
