Experiment – 4

Appointment Booking Reservation System Using Zoho One (SaaS)

Aim

To create an Appointment Booking Reservation System using Zoho One as a cloud-based Software as a Service (SaaS) application.

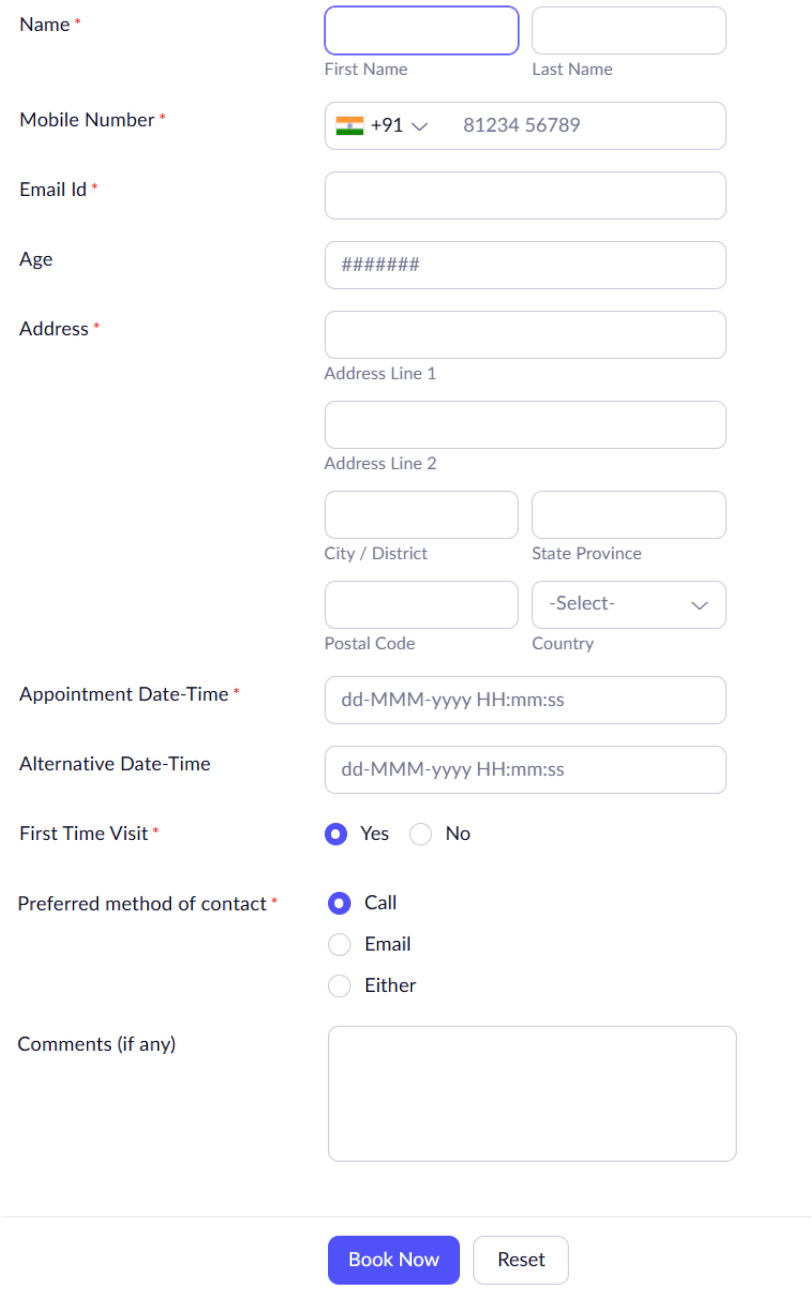

Procedure

1. Log in to the Zoho One cloud platform.
2. Open Zoho Creator from the Zoho One applications.
3. Create a new application for the Appointment Booking Reservation System.
4. Create a new form named Appointment Booking.
5. Add the required fields:
    - Customer Name
    - Email Address
    - Mobile Number
    - Appointment Type
    - Appointment Date
    - Appointment Time
    - Department
    - Staff Name
    - Booking Purpose
    - Appointment Status
6. Configure the field types according to the data required.
7. Design and arrange the form for easy user interaction.
8. Save and publish the form.
9. Enter sample appointment details into the form.
10. Submit the form and verify that the entered data is stored in the cloud.

11. Test the application by entering different appointment details.
12. Verify that the Appointment Booking Reservation System works successfully as a SaaS application.

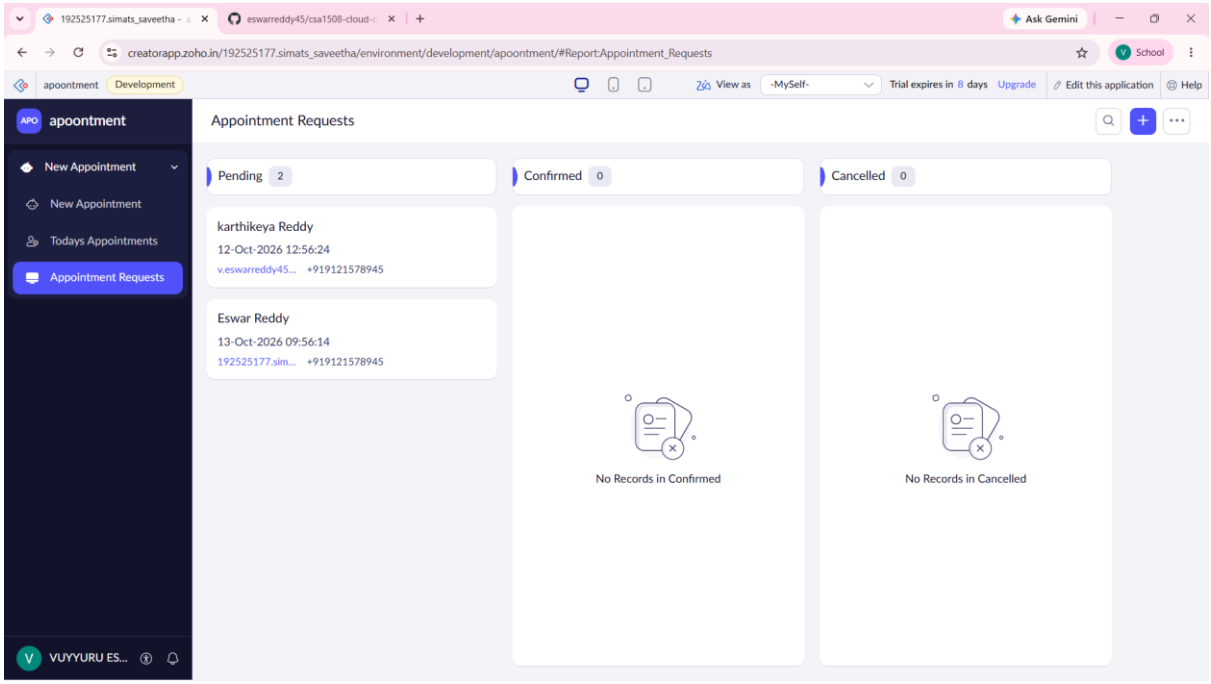

Implementation

Input:

Enter the required appointment details in the Appointment Booking form, including customer information, appointment type, date, time, department, staff name, and booking purpose.

Output:

The submitted appointment details are displayed in the Zoho Creator application. The stored appointment records can be viewed and managed through the application.

Result

Thus, an Appointment Booking Reservation System was successfully created using Zoho One and demonstrated as a Software as a Service (SaaS) application.
